Professional Summary

A results-driven Senior Software Engineer with 4 years of experience designing and developing robust, scalable web applications using **Angular**, **React**, **Node.js**, and **.NET**. **Microsoft Certified** in **Azure AI Fundamentals** and **GitHub Copilot** with hands-on experience integrating **OpenAI** APIs to drive code generation, refactoring, and legacy modernization. Delivers secure, user-centric solutions across healthcare, IoT, and telehealth domains—integrating RESTful and GraphQL APIs and implementing role-based authentication—while continuously adopting emerging AI-driven tools to enhance development speed and performance.

Skills

Frontend Technologies: React, Angular, Next.js, HTML, CSS, SCSS, Material UI, Bootstrap, Tailwind, Keycloak.

Backend & APIs: Node.js, .NET, RESTful APIs, JSON, HTTP requests, GraphQL, PostgreSQL, Prisma ORM, Server Actions.

AI Tools & Integration: OpenAI API, Claude, GitHub Copilot, Azure AI, AI-driven code generation & refactoring, prompt engineering.

Programming Skills: JavaScript, TypeScript, C#, C++, Python, Java.

Version Control & DevOps: GitLab, Gerrit, Docker, Vercel, Supabase, Tomcat, Jenkins, CI/CD.

Testing & Debugging: Unit Testing (Jasmine, Karma), Jest, Debugging Tools.

Data & Tools: Qlik Sense, SQL, Jira.

Soft Skills: Teamwork, Communication, Time Management, Presentation Skills.

Experience

EY GDS, Pune, Maharashtra

September 2025 - Present

Senior Software Engineer

- Developing full-stack features for legacy application modernization—building **Angular** front-end components while contributing to backend services in **.NET** and **C#**—accelerating delivery across the stack.
- Leveraging **GitHub Copilot** with custom instructions and reusable **prompt** templates to automate recurring development tasks, improving code consistency and personal throughput.
- Engineering **OpenAI API** integrations for automated code generation and refactoring within legacy projects, streamlining the development lifecycle and reducing manual effort.
- Collaborating with cross-functional teams to define integration requirements and successfully implementing **AI-driven** solutions for code refactoring and generation.

TATA Elxsi, Bangalore, Karnataka

November 2022 - July 2025

Software Developer

Baxter (Onsite), Bangalore

Jan 2025 - July 2025

- Developed responsive, accessible UI components for a secure healthcare portal using Angular 19, Tailwind CSS, and TypeScript, with **Keycloak**-based authentication enabling secure login flows and role-based UI rendering.
- Integrated GraphQL APIs for real-time events and notifications, and built a custom video streaming module with Shaka Player, managing state reactively via RxJS.
- Enable dynamic multi-hospital deployments through environment-specific JSON configs; wrote Jest unit tests for coverage and maintainability.

Ooredoo, Qatar - IoT Device Web Portal

Feb 2024 - Dec 2024

- Developed a large-scale IoT portal for real-time device tracking and status visualization using Angular 16, with JWT-based authentication for secure login, session management, and role-based access restriction.

- Integrated **Google Maps**, Ericsson Aeris APIs, and Node.js for real-time geolocation updates with RxJS live data binding; deployed via Docker with Jasmine & Karma unit tests in Agile.

TEngage – Telehealth Platform

Nov 2022 - Jan 2024

Built a telehealth web solution to facilitate real-time communication between patients, doctors, and hospital staff.

- Built modular, accessible UI for a telehealth platform connecting patients, doctors, and hospital staff using React (JSX), SCSS, Material UI, and Bootstrap, consuming RESTful APIs for real-time appointment and messaging features.
- Integrated the Amazon Chime SDK to enable secure video conferencing and virtual consultations.

Diagonal.ai, Bangalore

August 2022 - October 2022

Data Analyst

- Built KPI dashboards in Qlik Sense using real company datasets.

Projects

Rodent Shield — Full-Stack Product & Admin CMS (Independent Project)

Sole developer — architecture, database, admin portal, 3D front end, security, and deployment.

- Architected and shipped a production full-stack web app (Next.js 16 App Router, React 19, TypeScript) with a 10-model PostgreSQL schema via Prisma ORM across 25+ routes on Vercel, including a Zod-validated, rate-limited lead-capture pipeline with a status workflow and admin tracking dashboard.
- Built a role-protected admin CMS (Auth.js v5 + bcrypt) with server-action CRUD for products, pricing, media, blog, and leads — enabling a non-technical owner to manage all content with zero code deployments — and hardened it against OWASP Top 10 risks via strict CSP/HSTS headers, brute-force throttling with timing-safe user-enumeration defense, magic-byte upload validation, sanitized markdown, and Postgres row-level security.
- Developed a scroll-driven 3D product hero in Three.js as a reusable Web Component with adaptive mobile GPU tiering and reduced-motion fallbacks, plus a database-generated **SEO layer** (dynamic sitemaps, six Schema.org JSON-LD types) and GA4/Meta Pixel tracking.

Education

- **MVJ College of Engineering**, BE in Computer Science Engineering, 2018–2022, Bangalore, Karnataka, India.
- **Kendriya Vidyalaya No.2 Jhansi Cantt**, CBSE Class XII, 2017–2018, Jhansi, Uttar Pradesh, India.
- **Mother Sita Public School**, CBSE Class X, 2015–2016, Jhansi, Uttar Pradesh, India.

Achievements and Certifications

- [Microsoft Certified: Azure AI Fundamentals](#)
- [GitHub Copilot](#)
- Awarded with EY **Extraordinary YOU – Achiever Extraordinaire, EY GDS – Jun 2026**
Recognized for exceptional performance and outstanding contribution.
- **Extra Mile Award, TATA Elxsi** – Aug 2023
Awarded for outstanding performance, contribution, and perseverance in delivering impactful results.
- AWS Cloud Masterclass - Cloud Practitioner Essentials (Self-Placed) FutureSkills Prime.
- **Additional Learning:** JavaScript, ReactJS, Docker, Git, and RESTful APIs (LinkedIn Learning & O'Reilly).
